New nucleic acid encoding variants of tumor necrosis factor receptor associated factors useful for inhibiting tumor necrosis factor alphaneguated pathways, and for treating Crohn's disease, psoriasis, and rheumatoid arthritis.

Claim 5; Fig 2b; 74pp; English.

The present sequence is a tumour necrosis factor (TNF)-receptor associated factor-truncated (TRAF2TR) protein which inhibits TNF alpharegulated pathways. This sequence is a natural splice variant of human TRAF2-FL (Full-length) protein. The TRAF2TR variant is useful for inhibiting diseases involving overproduction of TNFalpha, TNFalpha

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         음
```

The present invention relates to antisense oligonucleotides (see AAA55495 nach55757) which are targeted to nucleic acids encoding a human tumour necrosis factor receptor-associated factor (TRAP). The antisense sequences comprise at least one modified internucleotide linkage, which is a phosphorothicate linkage. The oligonucleotides also include at least one modified sugar moiety such as a 2'-0-methoxyethy sugar moiety, sequences AAA55495 represent nucleotide sequences encoding human represent and sequences AAA98164-1988169 respresent the TRAFF-6 amino acid sequences. Included in the invention is a method for treating a human having a disease associated with the expression of TRAF comprising administering an antisense oligonucleotide. The reduction of jun kinase activation in cells comprises contacting the cells with an antisense oligonucleotide targeted to TRAF-6. A method for the reduction of E-Antisense oligonucleotides targeted to nucleic acids encoding human tumor necrosis factor receptor-associated factor (TRAF), useful for treating diseases associated with TRAF expression such as inflammatory diseases. 121 YESCHEGRCPLMLTECPACKGLVRLGEKERHLEHECPERSLSCRHCRAPCCGADVKAHHE 180 241 REHLAMILSSVLEAKPILGDQSHAGSBILQRCESLEKKTATFENIVCVLNREVERVAMTA 300 401 --FQDHVKTCGKCRVPCRFHAIGCLETVEGEKQQEHEVQWL 161 selectin expression in cells or tissues comprises contacting the cells or tissues with an antisense oligonucleotide targeted to TRAF-2 or TRAF-6. The antisense oligonucleotides have antiproliferative and anti-inflammatory activity and are useful for treating disorders associated with cell proliferation and inflammation. The antisense oligonucleotides may also be used as a diagnostic probe for studying gene function 9 1 MAAASVTPPGSLELLQPGFSKTLLGTKLEAKYLCSACRNVLRRPFQAQCGHRYCSFCLAS ILSSGPONCAACVHEGIYEEGISILESSSAFPDNAARREVESLPAVCPSDGCTWKGTLKE 61 ILSSGPONCAACVHEGIYEEGISILESSSAFPDNAARREVESLPAVCPSDGCTWKGTLKE 181 VCPKFPLTCDGCGKKKIPREKFQDHVKTCGKCRVPCRFHAIGCLETVEGEKQQEHEVQWL REHLAMILSSVLEAKPLIGDQSHAGSELLQRCESLEKKTATFENIVCVLNREVERVAMTA EACSROHRLDODKIEALSSKVOOLERSIGLKDLAMADLEOKVLEMEASTYDGVFIWKISD 282 FARKLQEAVAGRIPAIFSPAFYTSRYGYKMCLRIYLNGDGTGRGTHLSLFFVVMKGPNDA 342 LLRWPFNOKVTLMLLDQNNREHVIDAFRPDVTSSSFQRPVNDMNIASGCPLFCPVSKMEA 1 MAAASVTPPGSLELLQPGFSKTLLGTKLEAKYLCSACRNVLRRPFQAQCGHRYCSFCLAS Gaps 79; 92.6%; Score 2047.5; DB 3; Length 80.4%; Pred. TRAF2-FL has two variants, a splice variant of TRAF2 referred as "TRAF2 truncated"

(TRAF2TR) and a TRAF2 expression construct with enhanced dominant negative properties referred as "TRAF2 truncated-deleted" (TRAF2TD).

TRAF2-TR and TRAF2-TD are also capable of inhibiting TNF alpha signalling pathways. The TRAF2-TD are also capable of inhibiting diseases involving over production of TRAF2PD appearance of the variants are also useful for inhibiting and treating inflammatory processes involving typeractivation of nuclear factor kappa B (NFRB). The variants are also useful for inhibiting and treating inflammatory processes involving the TRAF2D and treating inflammatory processes involving the transplants host disease, psoriasis, rheumatory bowel disease, and neurodegenerative diseases or cardiovascular diseases such as cardial schematory broase such as cardial schematory horses and neurodegenerative diseases or cardiovascular diseases such as cardial schemata-reperfusion injury following myocardial infarction.

from the patient; (b) contacting the sample with a probe for HM expression; (c) comparing the sample with a probe for HM expression; (c) comparing the results with a control; and (d) determining whether the comparison indicates a likelihood disease). (MI) is useful for identifying modulators of the p53 pathway. A probe for HM expression is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 % expression level. Modulators identified by (MI) are useful in a variety of diagnostic and therapeutic applications, where disease or disorder prognosis is related to defects in the p53 pathway, such as, angiogenesis, apoptotic or cell contiferation of the cell, so that the cell undergoes normal contiferation of the cell, so that the cell undergoes normal contiferation of the cell, so that the cell cycle. (M2) and (M3) are useful for modulating the p53 pathway such as angiogenic, also useful for treating defects in the p53 pathway such as angiogenic, apoptotic or cell proliferation disorders. The present sequence represents a human p53 pathway modifying protein
                                                                                                                                                                                                                                                                                                                                                                                                         modulating agent, by contacting an assay system comprising a purish modulating agent, by contacting an assay system comprising a purish polypeptide (human orthologue of genes that modify the p53 pathway in Dorsophila) or mucleic acid with a test agent under conditions, where but for the presence of the test agent, the system provides a reference activity, and detecting a test agent-biased activity of the assay system. Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator that specifically binds to a HP polypeptide comprising an HM amino acid sequence, where p53 function is restored), modulating (M3) a p53 pathway in a mammalian cell (comprising the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising: (a) obtaining a biological sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 ILSSGPONCAACVHEGIYEEGISILESSSAFPDNAARREVESLPAVCPSDGCTWKGTLKE 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel isolated protein complex comprising a RING-SH 3 polypeptide and a polypeptide selected from a Gag protein, a Gag late domain, P13K, actin, myosin, Hsp60, Hsp70, Hsp90, STAM1, STAM2A, STAM2B, VHS-UIM, a GTPBAS, and Enzyme, tsg101, a cullin, RING-SH, and a clathrin. The novel protein complex has virucide activity and can be used to treat disorders as part of a vaccine. The protein complex and composition are useful for detecting cells infected with a virus, for identifying agents having antiviral activity, and for treating viral disorders caused by retroviruses, rhabdoviruses, or filoviruses. This sequence is a protein comprising the RING-SH complex of the invention.

The present invention relates to a purified complex comprising a lymphotoxin beta receptor (LTbetaR) polypeptide and Smac polypeptide. The lymphotoxin-beta receptor (LTbetaR) complex is useful for identifying modulators of LTbetaR activity or expression for treating or preventing cancer or an immune disorder such as autoimmune disorder, e.g. rheumatoid arthitis, systemic lupus erythematosus, Goodpasture's syndrome, Grave's disease, Hashimoto's thyroiditis, pemphigus vulgaris, myasthenia gravis, solredma, autoimmune haemolytic anaemia, autoimmune thrombocytopenic purpura, polymyositis, dermatomyositis, pernicious anaemia, Sjogren's syndrome, ankylosing spondylitis, vasculitis, or type I diabetes mellitus. The present sequence is a TRAFZ protein, which forms part of the complex of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               121 YESCHEGROPIMLTECPACKGLVRIGEKERHLEHECPERSISCRHCRAPCCGADVKAHHE 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                           The invention relates to a novel isolated, purified or recombinant polypeptide complex comprising a tumour necrosis factor alpha (TNF-alpha) polypeptide, a TNF-alpha receptor (TNRP) and a polypeptide selected from nuclear factor (NF) kappaB, activating kinase (NAK), RasGAP3, transducin repeat-containing protein (TRCP)1, TRCP2 and their variants, or their functional variants. The polypeptides of the invention demonstrate antiinflammatory and cytostatic activities and may be useful for treating TNF-alpha-related disorders, such as, inflammation or apoptosis, possibly via gene therapy. The current sequence is that of the TRAP2 protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         281

```

```
The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (1). The method is useful for examining the ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB57314) or by determining the expression profile of a gene group comprising these genes. The expression indicator when screening for ischaemic condition-improving drugs or indicator when screening for ischaemic condition-improving drugs or primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ILSSGPQNCAACVYEGLYEEGISILESSSAFPDNAARREVESLPAVCPNDGCTWKGTLKE 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    measuring

involved in the mediation of TNF and CD40 ligand biological activities. Recombinant TRAF2 is obtd. by expression in host cells of a CDNA clone (AAT12262) isolated using a Yeast two-hybrid assay. It is used to identify inhibitors of activities of TNF-R2, CD40 and/or LMP1 oncogene, e.g. for treratment of endotoxic (septic) shock and rheumatoid arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, tumour necrosis factor; TNP; TRAF2; inhibitor; treatment;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       엄
                                                                                                                                                                                                                                                                  The present sequence is tumour necrosis factor (TNF)-receptor associated factor truncated-deleted (TRAP2TD) protein. This sequence includes the naturally occurring splice variation and a deletion at the N-terminal end of human TRAP2 protein. The TRAP2TD variant is useful for inhibiting diseases involving hyperactivation of nuclear factor kappa B (NFB). The variant is also useful for inhibiting and treating inflammatory processes involving TNFalpha such as Crohn's disease, psoriais, rheumatoid arthitis, graft versus host disease, non-insulin dependent diabetes, inflammatory bowel disease, and neurodegenerative diseases or cardiovascular disease such as cardiac ischaemia-reperfusion injury cardial infarction, coronary artery bypass surgery, cardiac transplantation or ischaemia-reperfusion injury in the central nervous system (CNS) following stroke, the progression and rupture of advanced congestive heart failure, endothelial cell injury following balloon and angioplasty, or apoptotic cell death of myocardial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      147

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to novel human secretory or membrane proceins (ADAS-4072-ADAS-5710) and their coding Sequences (ADAS-2433-ADAS-4071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proceins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tumour necrosis factor (TNF) receptor has an important role in the regulation of cellular proliferation, differentiation, and apoptosis in inflammatory and immune responses. The present invention relates to a quantitative assay for measuring the ability of a substance to effect binding of a TNF receptor-associated factor (TNFAF) protein to its receptor. The present sequence is Human TRFAF(NC)-CA21 protein fragment, which was used in the present assay. This protein is the conserved C-terminal region (NC) of TRAF2, and possesses a C-terminal tag that is recognised by CA21 monoclonal antibody. Proteins which bind to the present sequence are detected by CA21 antibody which generates a signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Quantitative assay for measuring the effect of a substance on tumor necrosis factor receptor associated factor protein interaction with it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 CESLEKKTATFENIVCVLNREVERVAMTAEACSRQHRLDQDKIEALSSKVQQLERSIGLK

The invention relates to a complex between two interacting proteins in adipocyte cells, given in the specification. The proteins are identified by selecting a bait protein from a known adipocyte marker and then performing a yeast 2-hybrid selection to isolate prey proteins are cooled by commences of an adipocyte cDNA library. The proteins are designated SID (RTM) (selected interacting domains) proteins. Also included are a polymetic combinant host cell expressing at least one of the interacting compound in adipocyte cells, as ID (RTM) polymetic comprising any of the 738 amino acid sequences given in the specification (including its fragment or variant), a SID (RTM) polymucleotide comprising any of the 738 amino acid sequences given in the specification (including its fragment or variant), a vector comprising the vector, a protein chip comprising the polymeticles and a computing at the SID (RTM) polymucleotide, a recombinant host cell comprising all or part of the data, listed in the specification. The complex, polymetic chip comprising the polymetices and a compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. Comprising the polymucleotides and compounds are useful for part of the data, listed in the specification. The complex is probes or primers. The complex is particularly useful for identifying selected interacting domains (SID (RTM)) for screening drugs that modulate the protein interaction, thus chip interaction, thus ship interaction, thus selected interaction, thus ship interaction, the second complex is such as a subject of the data is sequence represents a SID control of the sequence of the protein interaction, thus seminated the protein interaction, thus seminated the protein interaction, thus seminated the present sequence represents a SID control of the sequence of the present sequence of SID control of the sequence of the present sequence of SID control of the sequence of the present sequence of SID control of the sequence of the sequence of SID control o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New complex between two interacting proteins in adipocyte cells, useful for identifying selected interacting domains that modulate protein interactions, or for preventing or treating metabolic disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

A novel human B-cell protein (AAW03147), termed Epstein-Barr induced apportein 6 or EB16, is induced by Epstein-Barr virus (EBV) infection. It appears to be the human homologue of murine tumour necrosis factor receptor associated factor TRAF1. A related novel B-cell protein (AAW03146), LAP1, was also identified. EB16 polypeptides, esp. the coil domain and C-terminal domain, can be used to inhibit LMP1-TRAF interaction. Such polypeptides, which may be obtd. by recombinant means (see also AAT31274), can be used to treat infection and control cell growth/tumourigenesis associated with LMP1-encoding viruses, partic. EBV

Antisense oligonucleotides targeted to nucleic acids encoding human tumor necrosis factor receptor-associated factor (TRAF), useful for treating diseases associated with TRAF expression such as inflammatory diseases.

Disclosure; Page 106-108; 170pp; English

-ASS757) Which are targeted to mucleic acids encoding a human tumour necrosis factor receptor-associated factor (TAAF). The antisense acquences comprise at least one modified internucleotide linkage, which is a phosphorothioate linkage. The oligonucleotides also include at least one modified sugar moiety such as a 2'-O-methoxyethyl sugar moiety. Sequences AAAS5490-AS5495 represent nucleotide sequences encoding human TRAF1-6, and sequences AAV38164-Y89169 represent the TRAF1-6 amino acid sequences. Included in the invention is a method for treating a human having a disease associated with the expression of FTAF comprising activation in cells comprises contacting the cells with an antisense oligonucleotide targeted to TRAF-6. Am method for the reduction of E-collectine expression in cells or tissues comprises contacting the cells or tissues with an antisense oligonucleotide targeted to TRAF-6. The method for the reduction of E-collectine expression in cells or tissues comprises contacting the cells or tissues with an antisense oligonucleotide targeted to TRAF-6. The matrisense oligonucleotides have antiproliferative and anti-inflammatory activity and are useful for treating disorders associated with cell proliferation and inflammation. The antisense oligonucleotides with any also be used as a diagnostic probe for studying gene function present invention relates to antisense oligonucleotides (see AAA55496

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 7, Ar
